PhD in Virology from Ecole Normale Supérieure Lyon in 2007.

Worked as a research scientist in Athens GA for Merial from 2007 and 2009 with the aim of developing molecular methods for screening new cell lines for increasing virus production.

Became Laboratory Manager in Analytical department in 2009 in France (Lyon) at Merial.

Lead a team with the aim of developing, industrializing, validating and transferring to quality control analytical methods for new Merial vaccines and for life cycle management vaccines.

Took a Project leader position in addition to my Analytical Manager in 2013 with the main goal is to replace the In Vivo potency tests by In Vitro potency tests for some product already licensed (i.e: leptospira, rabies).

Pursue my career in the US from 2015 in Athens GA still for Merial that became Boehringer-Ingelheim animal health in 2017.
